Select By Location

Lets you select features from one or more layers based on where they are located in relation to the features in another layer.

I want to:

select features from

the following layers:

towns_pnts

Nomoi

that:

intersect

the features in this layer:

towns_pnts

Use selected features (1 features selected)

Apply a buffer to the features in: towns_pnts

of: 15

Kilometers

Preview

The red features represent the features in towns_pnts. The highlighted cyan features are selected because they intersect the red features.
